Assignment-1

Connect and disconnect with login Access

- What happens when you login a non-existent users or username?
  - Provide Screenshot and What you understand, explain in short brief?

- User Vaibhav already exists and login with this user works fine

- Now trying with different user which does not exist on the VM and it complains of that it did not work, please try again. This came as user itself is not created and hence unable to access.
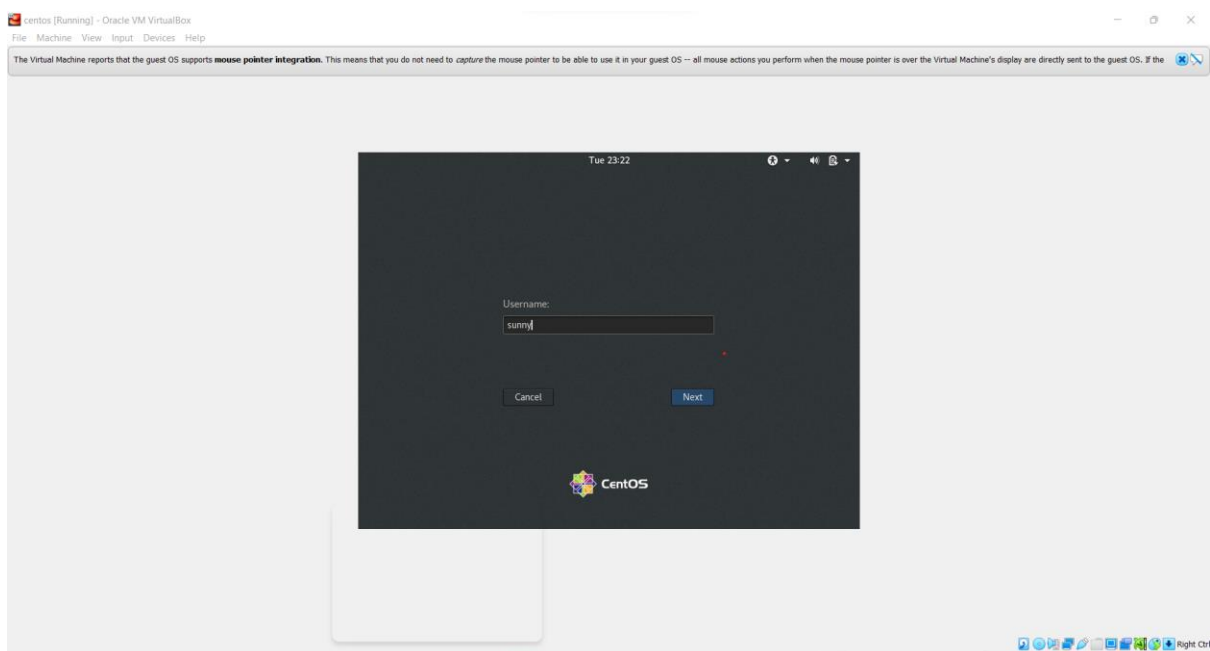

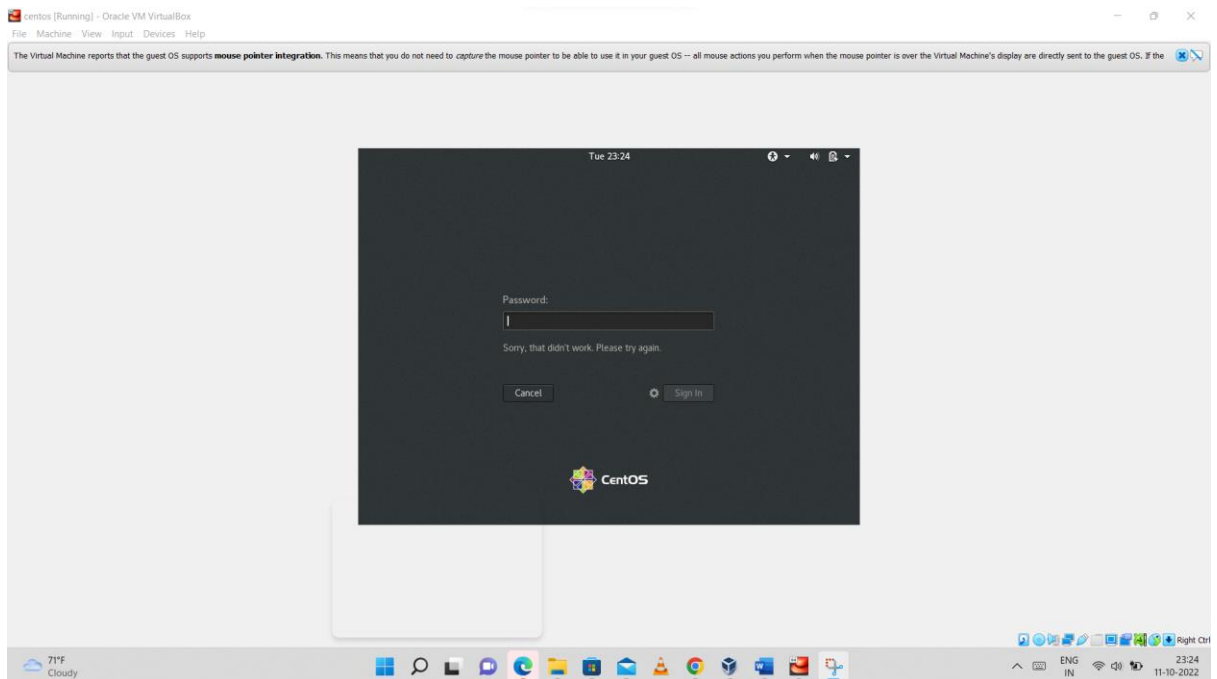

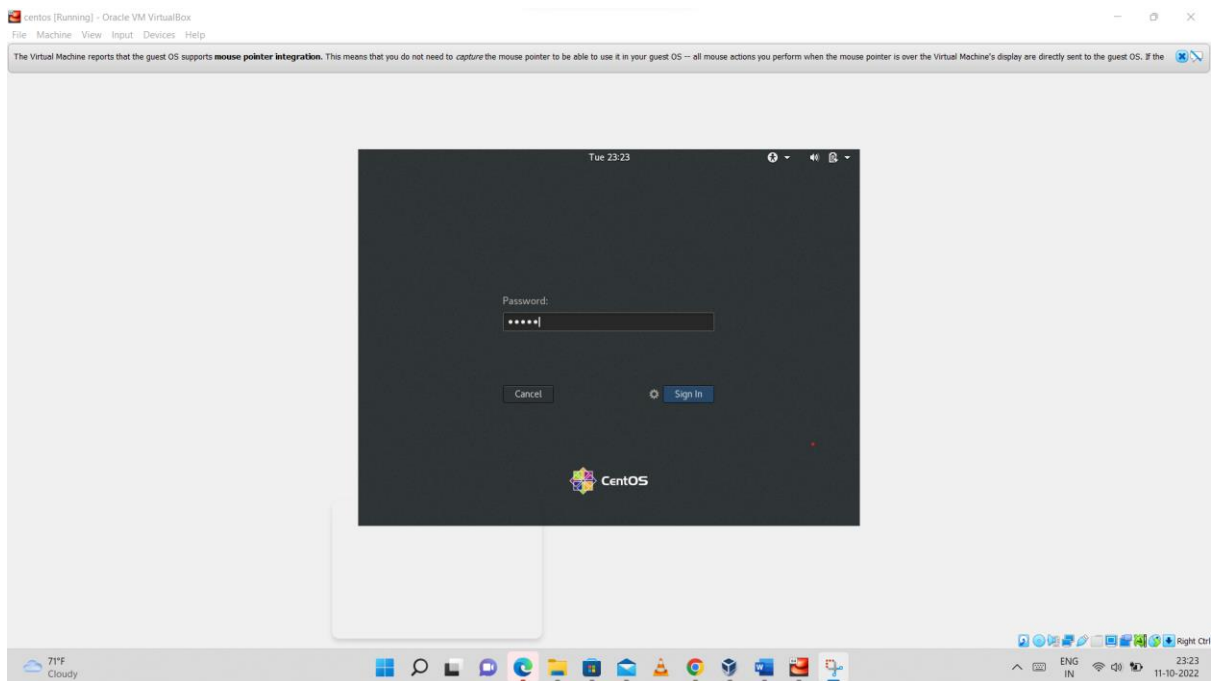

- Now logged into system with Vaibhav user and went into root user with help of sudo command and then creating user sunny and setting its password.
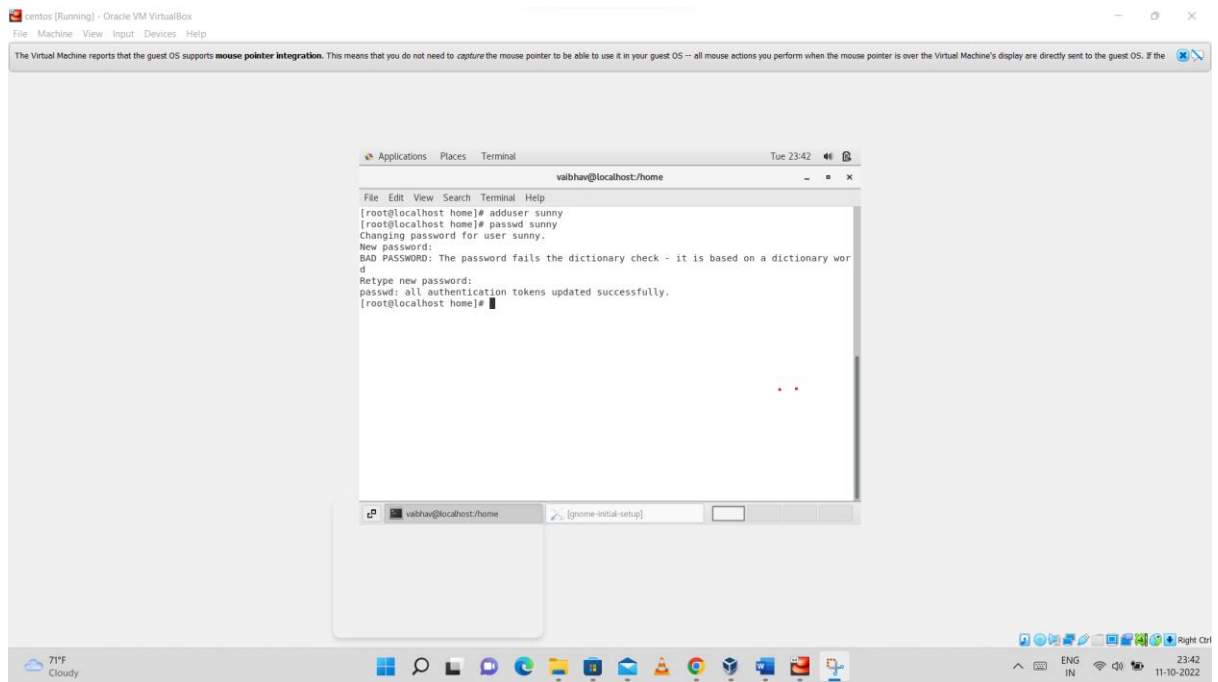

- Now logged out of root and then Vaibhav user and on main screen we can see that our new user we are able to see and can login as below-

File   Machine   View   Input   Devices   Help

The Virtual Machine reports that the guest OS supports **mouse pointer integration**. This means that you do not need to *capture* the mouse pointer to be able to use it in your guest OS — all mouse actions you perform when the mouse pointer is over the Virtual Machine's display are directly sent to the guest OS. If the
